DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: The description of axis 34 shown in the drawings as being a "longitudinal axis" is misleading and inaccurate in that relative to the main body 12, such axis appears to be a transverse axis.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the second paragraph of 35 U.S.C. 112: The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claims 1-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 1, 8, and 15 the recitation of a "longitudinal axis" is misleading and misdescriptive in that such axis is actually a transverse axis of the main body.

In claim 15, line 4, the recitation of "first and second structural members" is vague and indefinite in that only one structural member, pillar 80, is set forth in the drawings and description. In the last three lines, the recitation that the load transfer Art Unit: 3612

element is able to transfer a load to one of the inner panel and the structural members is mis-descriptive in the load transfer element transfers a load to the inner panel only, then the inner panel may transfer a load further. Note that the reference to the "second structural member" in claim 19 is also indefinite for the same reason.

In claim 18, the recitation that the load transfer element is "configured to activate" the condition sensor is misleading and mis-descriptive in that the inner door panel activates the condition sensor, not the load transfer element.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 5. Claims 1-17, as understood, are rejected under 35 U.S.C. 102(e) as being anticipated by Fukutomi.

Fukutomi discloses the claimed invention as shown in the marked up copies of Figure 1 attached hereto. Note that there is one marked up copy for claims 1-7 and one marked up copy for claims 8-14 Regarding claims 7 and 14, the main body is considered to be relatively rigid in that it is described in column 3, lines

Application/Control Number: 10/632,758

Art Unit: 3612

Page 4

50-54 as compressing and deforming another element, thus being rigid at least relative to this other element. Regarding claim 15, Fukutomi is considered to inherently include structural members for supporting the door in an aperture in the vehicle as is the standard configuration for every vehicle mounted door.

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 8. Claims 18 and 19, as understood, are rejected under 35 U.S.C. 103(a) as being unpatentable over Fukutomi in view of Kitagawa.

Art Unit: 3612

Fukutomi discloses the clamed invention except for the vehicle including a condition sensor on a structural member of a door support aperture.

Kitagawa discloses in Figure 44 a condition sensor 44 on a structural member 4 of a vehicle door support aperture.

It would have been obvious to one of obvious skill in the art at the time the invention was made to provide a structural member of Fukutomi which defines a door support aperture to include a condition sensor as taught by Kitagawa for deployment of a passenger protection device.

Conclusion

- 9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited art includes many load transfer elements that are quite similar to that of the current invention. Note especially, the load transfer elements 8 and 6,7 of Babatz et al., the load transfer elements 32,33 of Heranney, and the load transfer element 8 of Garnweidner.
- 10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph D. Pape whose telephone number is (703) 308-3426. The examiner can normally be reached on Tues.-Fri. (6:00-4:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenn Dayoan can be reached on (703) 308-3102. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
